## PROFILE

The ICADRUM models form a complete range of vessels for powders and granulate designed specifically for the pharmaceutical industry.

The ICADRUM vessels can be realised in two versions according to the load capacity.

The wide curvature of the internal corners assures:

- Utmost hygiene;
- Easy cleaning of the inside of the vessels;

## DESCRIPTION

ICADRUM is entirely realised in 316L stainless steel, thickness 1.5 mm, fine polished internally (mesh 400) and satin finished (mesh 320) externally.

ICADRUM is a cylindrical vessel with wide radius rounded corners to enable easy cleaning. The top cover consists of a lid which fits perfectly onto the upper lip of the vessel.

The lower part has a reinforced edge specially designed to allow the stacking of the vessels.

Engineering data		
Description	u.m.	Dimension
Internal diameter ( B )	Mm	455
External diameter ( C )	Mm	489
Height ( A )	Mm	760
Capacity	Lt	100
Weight	Kg	20

If it is required they are possible with different dimensions
